

Noisy LJ: MLP sampling experiments

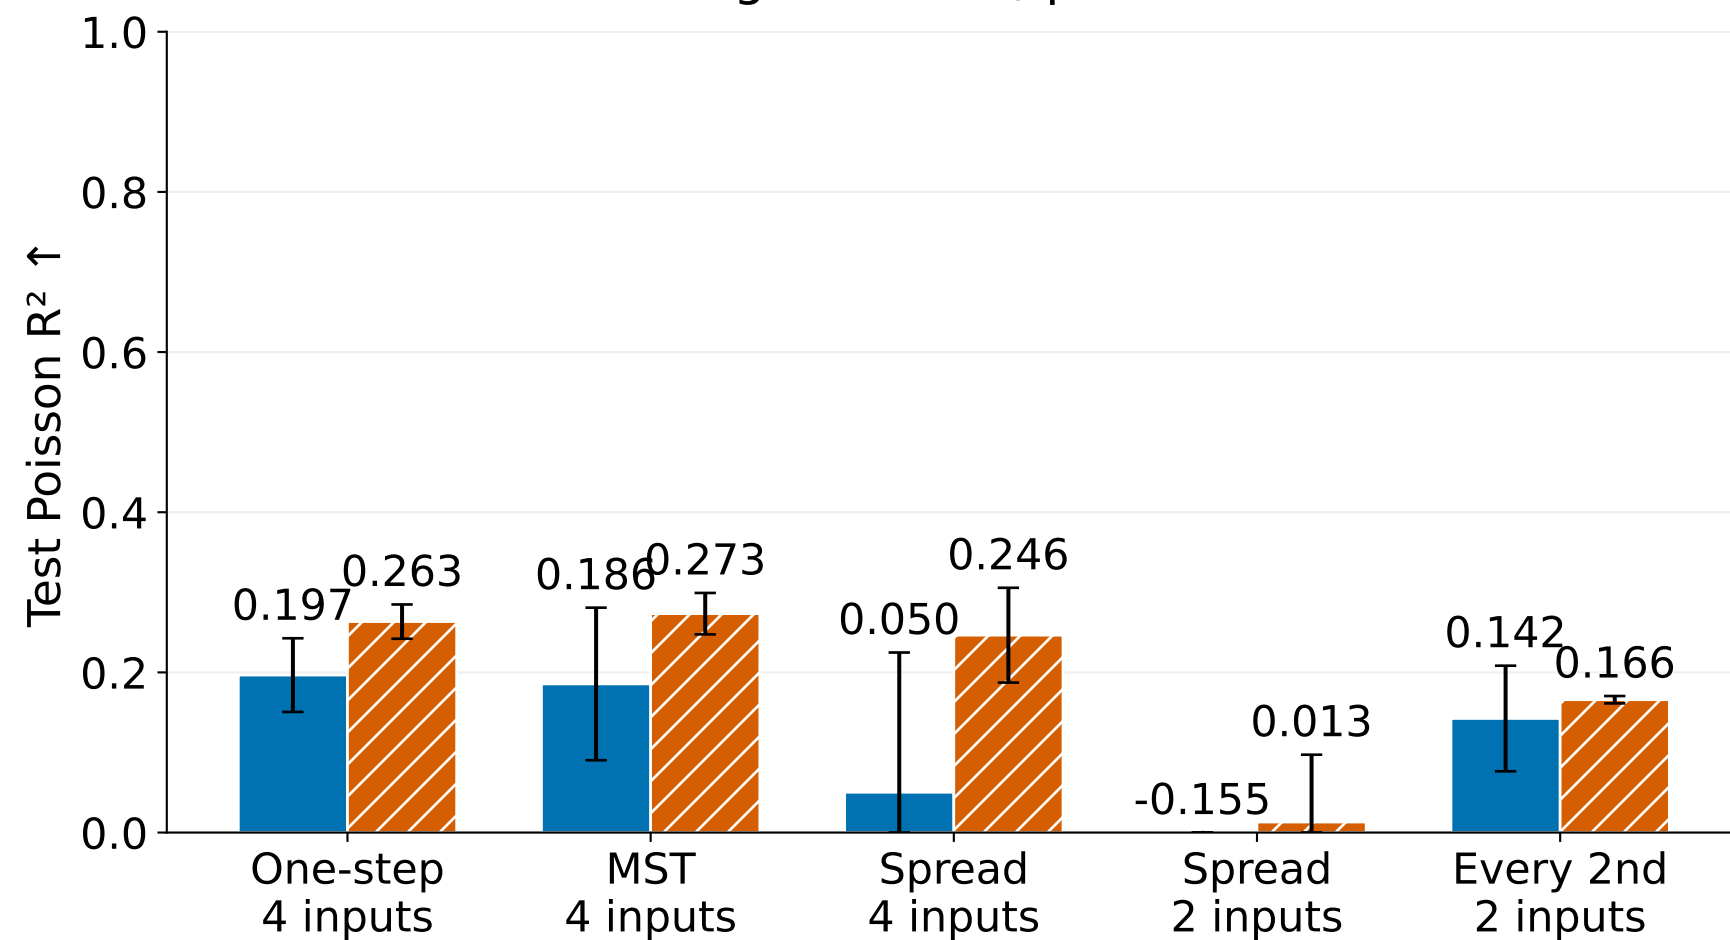

Observed through frame 15; predict to frame 115

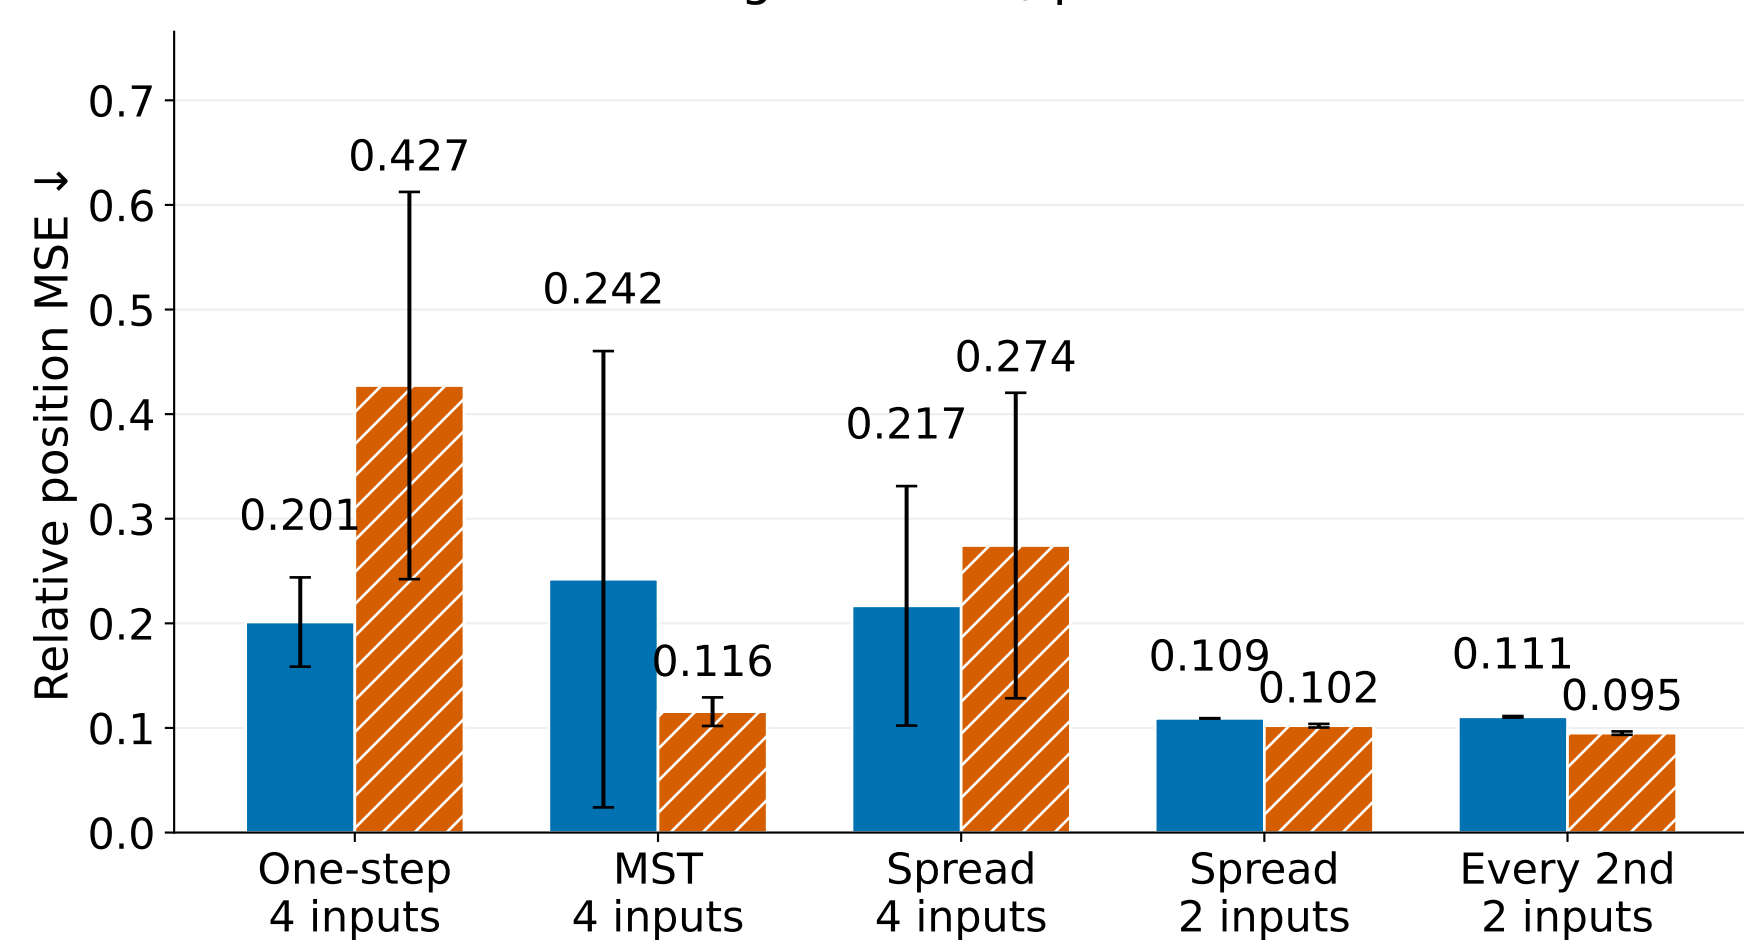

Observed through frame 15; predict to frame 115

Observed through frame 3; predict to frame 103

Observed through frame 3; predict to frame 103

Same 50 training / 50 validation / 70 test networks · Mean $\pm$ sample SD over 3 training seeds
Compare within each row: later observed frames change the task. Negative R^2 is drawn at 0; labels show actual values.
