

Noisy LJ: exploratory sampling protocols

Only frame-3, four-input protocols match the required benchmark

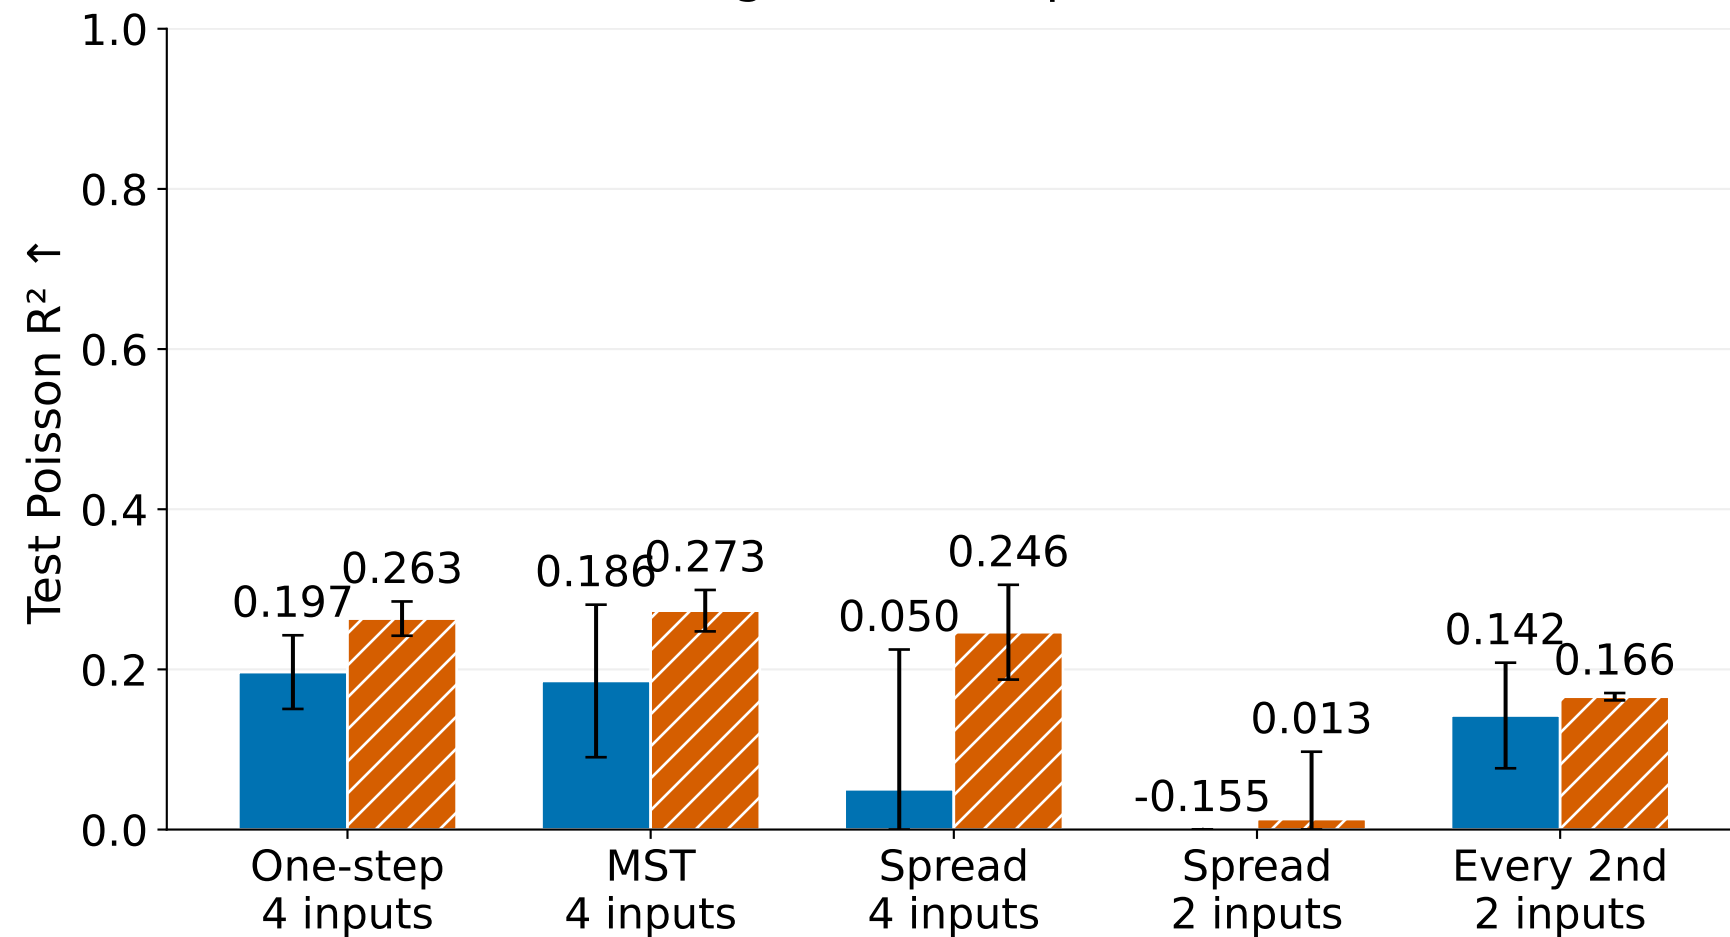

Observed through frame 15; predict to frame 115

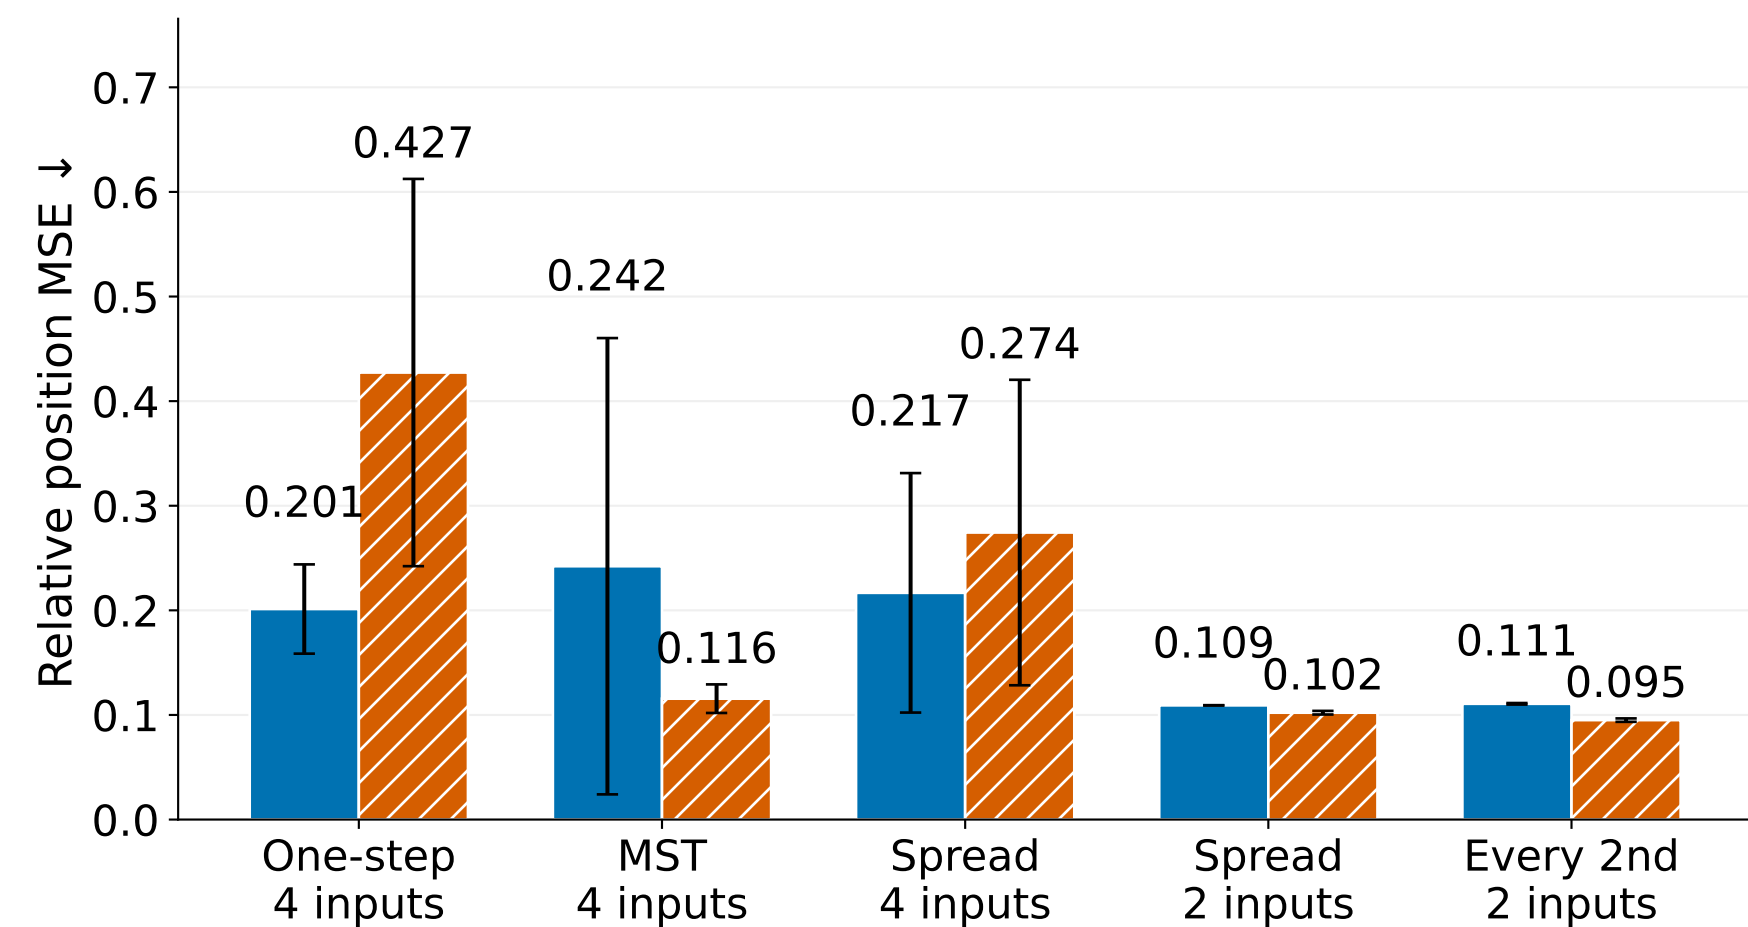

Observed through frame 15; predict to frame 115

Observed through frame 3; predict to frame 103

Observed through frame 3; predict to frame 103

Same 50 training / 50 validation / 70 test networks · Mean $\pm$ sample SD over 3 training seeds

Later starts and two-input protocols are excluded from benchmark claims. Negative R^2 is drawn at 0; labels show actual values.
